

“We need to make it easier for people making decisions to obtain and use evidence on what works, doesn’t work and is unproven in disaster settings.”

Mike Clarke is one of the founders of Evidence Aid, helping to establish this initiative in the aftermath of the Indian Ocean tsunami of December 2004. He is Director of the All-Ireland Hub for Trials Methodology Research at the Centre for Public Health in Queen’s University Belfast, taking up this new post in March 2011 after eight years as the Director of the UK Cochrane Centre. He has worked on several large randomized trials and dozens of systematic reviews in a wide range of areas, and has a strong interest in increasing capacity for the conduct and use of systematic reviews.
